DETAILED ACTION

Election/Restrictions

Applicant's election of Specie V in Paper No. 11 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 6-11, 13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected specie, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

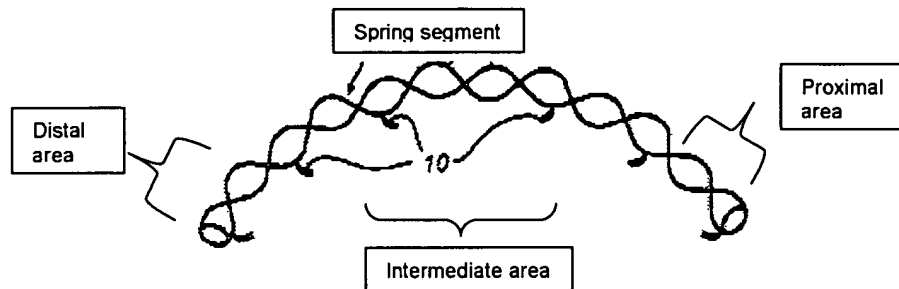

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Solem et al. (6210432). The examiner is interpreting the claimed elements of the bendable elongated body in this way: the sections are established as outlined in the figure below and have at least 2 sets of opposing end oriented barbs or hooks extending at each

Art Unit: 3738

section. The coil wire is a spring segment. Claims in a pending application should be given their broadest reasonable interpretation. *In re Pearson*, 181 USPQ 641 (CCPA 1974). It can be seen the barbs or hooks **10** are all along the body sections.

Solem et al. disclose a method of reducing mitral regurgitation by placing the prosthesis into the coronary sinus to reduce the gap between leaflets, col. 4, lines 19-21,38,39. Solem also discloses the device is made of a shape memory alloy (col. 3, lines 38-41) which inherently enables the device to transform from a first configuration to a second configuration. It can be seen there are two helical spring wires forming the prosthesis that extend from end to end.
